PROFESSIONAL SUMMARY

I believe technology creates the greatest impact when it solves real problems for real people. Through my academic and internship experiences, I gained hands-on exposure to application development, software testing, and UI/UX design, discovering that the best solutions come from collaboration, continuous learning, and understanding user needs. As I begin my professional journey, I look forward to strengthening my technical skills, embracing new challenges, and contributing with curiosity, adaptability, and a commitment to building reliable technology solutions.

EDUCATION

Bachelor of Science in Information Technology (BSIT)

2022-2026

Bulacan State University

- AWARDS:** Cum Laude | Dean's Lister (A.Y. 2022 –2023, A.Y. 2023 –2024) | Student Organization Service Award
- LEADERSHIP & ORGANIZATIONS:** POSHED Treasurer (2024), Secretary (2025) | Rotaract Club — Secretary (2025)

TECHNICAL SKILLS

- Programming Languages:** Java | JavaScript | Python
- Web Technologies:** HTML5 | CSS3 | React | Tailwind CSS | Node.js
- Database and Backend Services:** MySQL | Firebase
- Development Tools:** Git | GitHub | Vercel | VS Code | Vite
- Design Tools:** Canva | Figma | Adobe Photoshop | Adobe Illustrator | Adobe Animate

INTERNSHIP EXPERIENCE

UI/UX Designer and Quality Assurance Intern

Jan-Mar 2026

Highly Succeed Inc. | Mandaluyong, Philippines

- Designed user interfaces and prototypes for client web applications while presenting system demonstrations to municipal stakeholders, ensuring solutions aligned with business requirements and client expectations.
- Executed functional, regression, and duration testing by identifying, documenting, and validating software defects, improving application quality and supporting successful pre-deployment validation.
- Led a team of graphic design interns by assigning tasks, monitoring deliverables, and streamlining design workflows, improving team coordination and operational efficiency within the Graphics Department.

PROJECT EXPERIENCE

TDS (Total Dissolved Solids) Level Monitoring System

IoT-Based Web Application | React, JavaScript, Firebase Realtime Database, ESP32

- Developed an IoT hardware prototype by integrating an Arduino, ESP32, TDS sensor, and SIM800 GSM module, enabling automated water quality monitoring and real-time SMS notifications for unsafe TDS levels.
- Configured communication between IoT devices and Firebase Realtime Database to support real-time data transmission, enabling continuous monitoring of water quality through a centralized web application.
- Collaborated with the development team to integrate hardware components with the monitoring system, contributing to a solution that reduced reliance on manual water quality inspections and supported faster operational response.

Northern Cuts – E-Commerce Website

Web Application | HTML, CSS, Figma

- Designed high-fidelity user interfaces and interactive prototypes in Figma, translating business requirements into an intuitive online shopping experience for the client's furniture business.
- Developed responsive front-end web pages using HTML5 and CSS3, ensuring compatibility and consistent functionality across desktop and mobile devices.
- Collaborated with the backend developer to integrate front-end components into a functional e-commerce platform, supporting product browsing and inventory management functionality.

TUGON: A Real-Time GPS Location-Based Tracking System

- Analyzed citizen needs and emergency workflows to define user flows and system interactions for the mobile application, supporting a clear and intuitive user experience.
- Designed wireframes, high-fidelity interfaces, and interactive prototypes for the mobile application, providing developers with clear UI/UX specifications for implementation.

CERTIFICATION

- Data Analytics Essentials by Cisco Networking Academy
- Microsoft Artificial Intelligence Course: Azure AI Fundamentals — TESDA
